

Continuous MVR Monitoring

Identify Risk Early

Benefits

- Reduced Accidents, Liabilities, and Claims
- Financial Savings
- Continuous Alerts
- Brand Protection
- Expedited Intervention
- Reduced Workload
- Identify Risky Driving Patterns
- Maintained Company Compliance

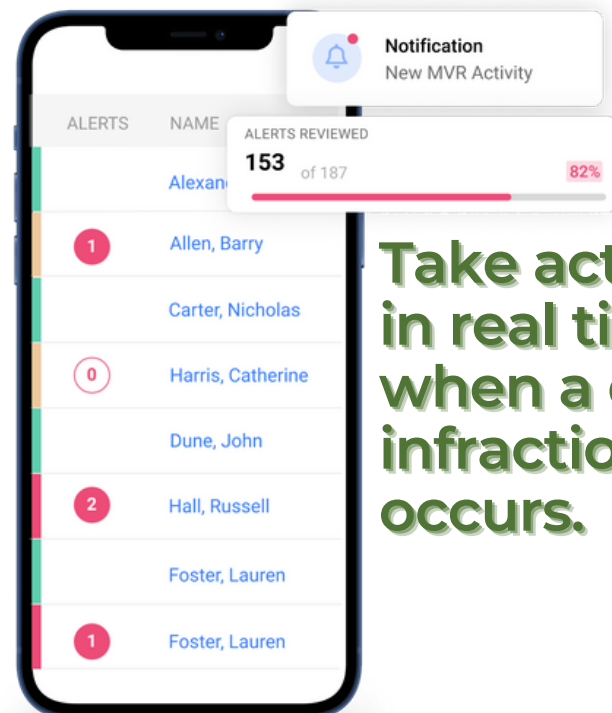

What you need to know

Motor vehicle crashes both on and off the job can cost an employer hundreds of thousands of dollars per year. This is why driver risk management has become essential for organizations when evaluating their budget and business profitability.

It's currently a requirement for an organization to pull a Motor Vehicle Record (MVR) once a year. However, this leaves a huge gap between when the first MVR is ran and when the employer reviews their next MVR pull. This gap opens your company up to a lot of risk. For example, what if one of the following happens?

- A driver receiving a DUI, or DWI.
- A driver receiving a license suspension
- A driver operating a vehicle with a suspended license.

Drivers with suspended licenses are 14 times more likely to be involved in an accident. Having continuous, real-time data available will prevent these liabilities from happening and protects the reputation of your organization.

Take action in real time when a driving infraction occurs.
